Odoo Admin Guide: Practice Company

Prepared by: Tsebaot Yared | System: Odoo (trial) | Date: October 19, 2026

1. Users and access rights

user	role	Acces
Buyer Test	Creates purchase orders	Purchase: User
Storekeeper Test	Receives goods	Inventory: User
Accountant Test	Records bills and payments	Accounting: Bookkeeper
Manager Test	Approves large orders	Purchase: Administrator
Salesperson Test	Creates sales orders	Sales: User (own documents only)

Principle: minimum access for each job, so no one person can order, receive, and pay (Segregation of Duties). Every user was tested by logging in as that user.

2. Approval rule

- Purchase orders above 20,000 ETB need approval.
- Approver: Manager (Purchase Administrator).
- Tested with a 24,000 order, which stopped at To Approve, and a 4,000 order, which went straight through.

3. Troubleshooting table

Problem	Cause	Fix
Delivery says “processed less than demand”	Not enough stock	Create a backorder, or restock first
User can’t see an app	No access rights for that app	Settings → Users → Access Rights → assign the app
Vendor bill won’t confirm	Missing bill date	Fill in the bill date, then confirm

4. Backup routine

- When: every [week] and before any import, update, or settings change.
- Where: download from the database manager.
- Copies: 2, one on [your computer] and one on [Google Drive or flash disk].
- Check: file size is not 0 KB, and a restore is tested when self-hosting.
